Ficus carica root 4g,

Radix Scrophulariae 2g,

Radix Polygoni Multiflori 2g,

Fructus Foeniculi 3g,

Bombyx Batryticatus 4g,

Juglans regia 3g.

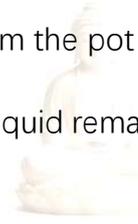

Preparation and Administration

This is the daily dosage for one adult (halve the dosage for children), with a treatment course of 7 to 10 days.

1. Arrange the medicinal materials in the pot in the specified order as shown

in the figure, and decoct twice in succession.

2. First decoction: Add three bowls of clear water, bring to a rolling boil over high heat until steam escapes from the pot lid, then turn to low heat and simmer until only one bowl of medicinal liquid remains in the pot; strain and set the liquid aside.

The Herbal Order

3. Second decoction: Add two bowls of clear water, bring to a rolling boil over high heat until steam escapes from the pot lid, then turn to low heat and simmer until only half a bowl of medicinal liquid remains in the pot; strain and combine with the first decoction.

4. Mix the two batches of medicinal liquid thoroughly, and take in two divided doses within one day (children may take in multiple small doses).

5. For infant patients: The mother may breastfeed the baby half an hour after she has taken the medicinal liquid.
